(54) METHOD FOR WORKING INTERNALLY NITRIDED MOLYBDENUM-ZIRCONIUM ALLOY

(57)Abstract:

PURPOSE: To obtain an Mo alloy with high strength at high temp. and superior workability by forming an Mo-Zr alloy contg. a specified amount of Zr and by internally nitriding the Mo-Zr alloy.

CONSTITUTION: An Mo–Zr alloy contg. 0.01W1.0wt% Zr is worked at about 700W $1,000^{\circ}$ C, and the Mo–Zr alloy is internally nitrided to obtain an Mo–Zr alloy with high strength such as high tensile strength or hardness at about $1,000W1,800^{\circ}$ C high temp. When the internal nitriding temp. is \leq about $1,350^{\circ}$ C, an Mo–Zr alloy with relatively high hardness is obtd., and when the internal nitriding temp. is \geq about $1,350^{\circ}$ C, an Mo–Zr alloy with high toughness and tensile strength is obtd.
